Q1 2024 CORPORATE PRESENTATION

OUR BUGS EAT ROCKS!

LEGAL **DISCLAIMER**

This presentation contains certain forward-looking statements within the meaning of Canadian securities legislation (the "Forward-looking Statements") and within the meaning of Section 21E of the United States Securities Exchange Act of 1934, as amended. Although the Company believes that such statements are reasonable, it can give no assurance that such expectations will prove to be correct. Forward-looking statements are statements that are not historical facts; they are generally, but not always, identified by the words "expects," "plans," "anticipates," "believes," "intends," "estimates," "projects," "aims," "potential," "goal," "objective," "prospective," and similar expressions, or that events or conditions "will," "would," "may," "can," "could" or "should" occur, or are those statements, which, by their nature, refer to future events. The Company cautions that forward-looking statements are based on the beliefs, estimates and opinions of the Company's management on the date the statements are made and they involve a number of risks and uncertainties. Consequently, there can be no assurances that such statements will prove to be construed as, a prospectus, an offering memorandum, an advertisement or a public offering of securities. Under no circumstances should the information contained herein be considered an offer to sell or a solicitation of an offer to buy any securities.

Important factors that could cause future results to differ materially from those anticipated in these forward-looking statements include the inherent risks involved in the exploration and development of mineral properties, the uncertainties involved in interpreting drilling results and other ecological data, fluctuating metal prices, the possibility of project cost overruns or unanticipated costs and expenses, uncertainties relating to the availability and costs of financing needed in the future and other factors described in the section entitled "Risks" in BacTech Environmental Corporation's Management Discussion and Analysis for the Year Ended December 31, 2020. Circumstances or management's estimates or opinions could change. The reader is cautioned not to place undue reliance on forward-looking statements. The reader is urged to refer to the Company's reports, publicly available through the Canadian Securities Administrators' System for Electronic Document Analysis and Retrieval (SEDAR) at www.sedar.com for a more complete discussion of such risk factors and their potential effects. Except to the extent required by applicable securities laws and the policies of the Canadian Securities Exchange, the Company undertakes no obligation to update these forward-looking statements if management's beliefs, estimates or opinions, or other factors, should change. New factors emerge from time to time, and it is not possible for BacTech Environmental Corporation to predict all of them or assess the impact of each such factor or the extent to which any factor, or combination of factors, may cause results to differ materially from those contained in any Forward-looking Statement. Any Forward-looking Statements contained in this presentation are expressly qualified in their entirety by this cautionary statement.

While the information contained in this presentation is believed to be accurate, BacTech Environmental Corporation expressly disclaims any and all liability for any losses, claims or damages of whatsoever kind based upon the information contained in, or omissions from, this presentation or any oral communication transmitted in connection therewith. In addition, none of the statements contained in this presentation are intended to be, nor shall be deemed to be, representations or warranties of the Company. Where the information is from third-party sources, the information is from sources believed to be reliable, but the Company has not independently verified any of such information contained herein.

COMMERCIALLY PROVEN CLEANTECH COMPANY

Focused on sustainable mining and environmental remediation bioleaching technology

Commercially Proven

Over 30 years of R&D, millions invested, and 3 plants built across the world

Environmentally Friendly

Bioleaching plants remediate toxic concentrates and produce an EPA landfillable waste product

Favourable Macroeconomics

Ecuadorian artisanal and small miners are currently being paid <50 cents on the dollar for their high-grade concentrates

Large Market

The market for artisanal and small mines globally is US\$27B or approximately 20% of global gold production

Niche Opportunity

BacTech is one of the only companies with the expertise to chase high-gold and high-arsenic concentrates

Research & Development

Numerous ongoing R&D projects with the potential to make a large impact on the company's revenues in the coming years

SUSTAINABILITY AT OUR CORE

BACTERIA

The bacteria are naturally occurring and harmless to the environment and human health

HEAVY METAL RECOVERY

Toxic heavy metals, like arsenic, are converted into stable environmentally benign products that can be disposed of in a landfill

NO MERCURY & REDUCED CYANIDE

Reduction in use of mercury by artisanal miners. We will not buy pre-treated concentrates

WATER

Efficient recycling of water from the process

EMISSIONS

No toxic gaseous emissions (e.g., S02,As203)

PERMANENT SOLUTION

Bioleaching is a permanent solution, not a Band-Aid fix

CAPITALIZATION STRUCTURE

	As at January 1, 2024
Basic Shares Outstanding	193,035,333
Reserved for Issuance (Options & Warrants)	39,339,015
Fully Diluted	232,374,348
Market Capitalization (\$0.07)	C\$13.5M
Average Daily Volume	80,000+
52 Week Range	\$0.10 - \$0.06

Jay Naster Director, Audit Committee

PAST MILESTONES

Carried out test work on five samples that produced **96.2% gold** recovery and **99.9% arsenic** stabilization. Completed Bankable Feasibility Study showing **US\$17M** in Capex, **\$US75M NPV** @**\$1800 gold**. Received Environmental Impact Study (EIS) in 7 months and was granted the final permit. Received an **80% rating** (very good) from Moody's for our proposed **US\$20M** green/social bond. Received Consultation Permit which is the final MAJOR permit-100% local support.

Sulfides are the GLUE of nature... Millerite SPHALERITE Arsenopyrite^{COVELLITE} Chalcopyrite **PYRITE Galena Molybdenite** MARCASITE Pyrrhotite Chalcocite

...and the CAUSE of

Toxic Concentrates and Tailings

High arsenic concentrates are generally burned and pollute the air, and tailings cause acid rock drainage

Toxic Elements Released into Atmosphere

Pyrometallurgical processing releases arsenic trioxide and sulfur dioxide in the atmosphere

Expensive Reclamation and Remediations

Billions are spent every year on land reclamation and remediation without solving the problem – a band aid solution

THE SOLUTION

Bioleaching AKA Bacterial Oxidation

Our Bugs Eat Rocks!

BacTech Environmental is one of 2 companies worldwide with the expertise for vat bioleaching as an alternative to smelting/roasting.

How?

We like to use the analogy of a brick wall where the sulfides are the mortar holding everything together in the rocks. The bacteria we use break down and oxidize the sulfides.

Once the mortar is gone, the wall comes crashing down. The pH in the tanks is very acidic. Acid soluble metals such as iron, arsenic and copper dissolve into the solution. Gold and silver are now free for recovery in the solids.

ECUADOR BIOLEACHING FACILITY

THE FIRST DOMINO

Substantial Revenues within 12 months

TENGUEL PROJECT

Assumptions: Gold \$1.798 | Silver \$18

BacTech is working to construct an owner operated **50 TPD bioleach processing** facility in Tenguel, Ecuador.

The project is at an advanced stage and expected to begin construction once financing is secured.

	E-Clinical and the second second
Annual Gold Production	30,981 Ounces
Capital Cost	US\$17M
Operating Cost	US\$212 per Tonne
Purchase Price of Feedstock	65-70% of Contained Gold Value
After-Tax NPV 5%	US\$75.4M
After-Tax Payback	2.95 Years
Annual Revenue	US\$56M

Project Milestones

- ✓ Bioleach Test Work
- ✓ Bankable Feasibility Study
- ✓ Land Acquisition
- ✓ Construction Permit Granted
- ✓ EIS Granted in 7 Months
- ✓ Consultation Permit

Detailed Engineering Ongoing

Financing Discussions Ongoing

Primary Ore	Metals Recovered
Arsenopyrite	Gold, Silver

GREEN BONDS

- BacTech to issue US\$20M Green Bond for the Ecuador project
- US\$16M for plant + US\$4M for working capital
- Moody's has reviewed the proposed plant and technology and awarded an 80% rating for bonds issued by BacTech as "green" and "social"
- Engaged Quito-based broker Analytica Securities to market US\$20M to their clients
- BacTech "ticks all the boxes" with respect to green bond issuers

WHY ECUADOR?

- ✓ Providing environmentally friendly processing locally and with positive local economic impact as BacTech can offer much better prices to miners.
- Full support from the Ecuadorian Ministry of Artisanal and Small Miners and the Ministry of Mines.
- Potential to become a regional processing hub. Opportunity to expand without disrupting operations.
- ✓ Access to green hydro power and existing local infrastructure. BacTech Environmental owns the land that the plant will be built on.
- Capture majority of the local small miner production because of reduction in revenues due to Chinese arsenic import limits.

Ecuador needs to generate investment into green resource development to grow their economy.

Project Site Tenguel, Ecuador

INVESTMENT PROTECTION AGREEMENT

- Historic agreement signed on April 28, 2022, with the Government of Ecuador.
- Covers up to US\$75M in investment into Ecuador extending to any plant and operations expansions.
- Under the IPA agreement specific protections relate to investor rights and guarantees such as:
 - Guarantee of non-discrimination;
 - Right to property;
 - Freedom of production and marketing of goods and services, free transfer abroad of profits, freedom of import and export operations; tax stability, including exemption from Income Tax for 12 years; and arbitration for dispute resolution.

Julio José Prado, Ecuador's Minister of Production, Foreign Trade, Investment & Fisheries & Bernardo Brito, BacTech's Country Manager.

ECONOMIC SENSITIVITY

A A A A A A A A A A A A A A A A A A A	Au Price	NPV (5%)	IRR	EBITDA
	\$1,600 USD	\$60.7M	58.0%	\$10.9M Annually
	\$1,700 USD	\$68.0M	63.6%	\$11.9M Annually
- Alexander	\$1,800 USD	\$75.4M	69.3%	\$12.9M Annually
	\$1,900 USD	\$82.7M	74.9%	\$13.9M Annually
	\$2,000 USD	\$90.1M	80.5%	\$14.9M Annually
	\$2,100 USD	\$97M	86%	\$15.9M Annually

TENGUEL PROJECT – PHASE 2

- Part of the IPA was BacTech's commitment to build a Phase 2 of the project
- The technology is modular, so expansion is straight forward
- Expected total production >100,000 oz. per annum
- Total market in Ponce area is 250 TPD of concentrate
- Estimated CAPEX is US\$60M, in addition to the US\$17M for Phase 1
- Working capital will be provided by Phase 1

1 tonne mining sacks filled with arsenopyrite in Ponce Enriquez.

PYRRHOTITE TAILINGS TREATMENT

SECOND OPPORTUNITY

~US\$13-\$15B of Nickel Ready for Recovery

SUDBURY BASIN MARKET OPPORTUNITY

In the Sudbury basin of Ontario, there is a vast resource of approximately 80-100 million tonnes of 0.8% Ni-bearing pyrrhotite tailings, which has been disposed of separately in shallow lakes since production began many years ago.

Metal Recovery from Radio Hill Pilot Plant

Metals	Recovery Rate
Nickel	98%
Cobalt	98%
Iron	99%

Assumptions: Nickel \$16,000

~US\$13-\$15B

In recoverable Nickel in the Sudbury Basin

Primary Ore	Metals Recovered
Pyrrhotite	Nickel, Cobalt, Iron

SUDBURY BASIN TAILINGS

- BacTech has filed a provisional patent application for a novel bioleaching process relevant to the treatment of pyrrhotite tailings for iron, sulphur and nickel-cobalt recovery.
- From 1997-1999, BacTech demonstrated that bioleaching is effective in liberating nickel, cobalt and iron.

Metal Recovery from Radio Hill Pilot Plant

RADIO HILL PILOT PLANT

- From 1997 to 1999, BacTech demonstrated that bioleaching was effective at liberating nickel, cobalt and iron from pyrrhotite tailings at the Radio Hill Pilot Plant.
- At the time, the economics of the metal prices led to the project not being pursued.
- BacTech is updating the technology to liberate billions of dollars of battery metals from tailings in the Sudbury Basin.

INVESTMENT SUMMARY

Economics

- Focused on high-arsenic gold concentrates produced by artisanal and small miners
- Environmentally friendly process
- EBITDA margin of 25-30%
- Low CAPEX to EBITDA ratio
- ~US\$60M annual revenue generated from US\$17M Capex (\$1800 Au)
- Internal Rate of Return of 57.9%
- Bioleaching test work complete
- Bankable feasibility study complete
- Environmental impact study approved
- Consultation permit approved
